

Bancroft Brain Injury Services

2010 Outcomes

Brain Injury in the U.S.

Of the 1.4 million people who sustain a traumatic brain injury (TBI) each year:

- 50,000 die
- 235,000 are hospitalized
- 1.1 million are treated and released from an emergency department

In addition, many others who sustain TBI receive no care. Their numbers are unknown.

Brain Injury in N.J.

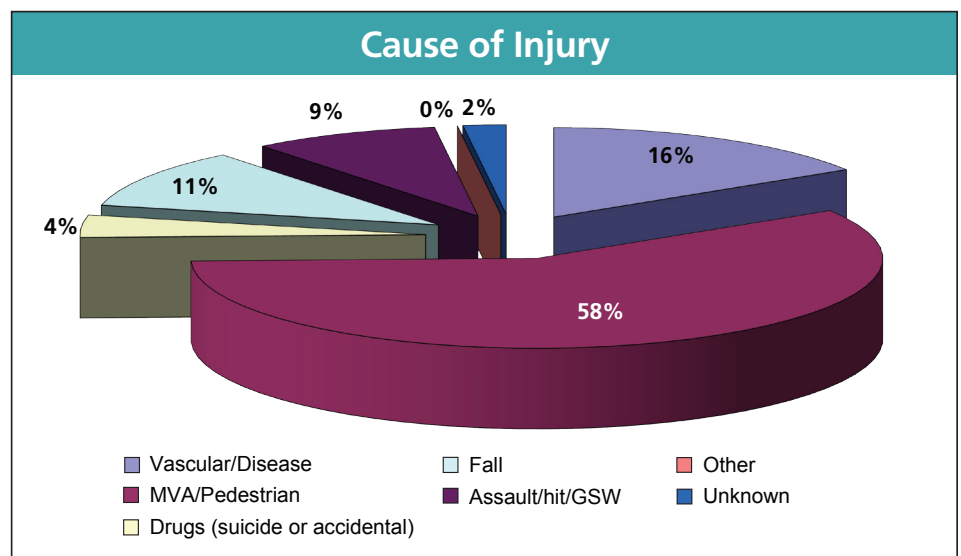

- An estimated 12,000-15,000 N.J. residents sustain brain injuries from traumatic events each year, and 1,000 die.
- About 175,000 state residents currently live with disabilities from traumatic brain injuries (TBI).
- Leading causes of TBI are motor vehicle crashes, falls, assaults and self-inflicted injuries.
- The majority of TBIs are sustained by people under age 35.
- Brain injury rates rise sharply after age 65, primarily due to an increased incidence of falls.
- The age pattern of brain injury is similar for all racial and ethnic groups.

Bancroft Brain Injury Services – 2010 Outcomes

Rehabilitation outcomes: participation

A key focus of brain injury rehabilitation is community participation – the ability to take part in everyday activities like working, volunteering, continuing education, shopping, banking, going to the gym, taking part in recreation and leisure activities, and more.

Although we've seen an overall increase in the severity of injury at the time of admission, the level of community participation and integration continues to improve. This is an excellent indicator of the quality and effectiveness of Bancroft's brain-injury services.

Rehabilitation outcomes: adjustment

People supported by Bancroft Brain Injury Services also demonstrate improvement in emotional functioning and adjustment.

People learn to acknowledge their limitations and work to compensate and overcome them rather than be limited by them.

“Bancroft has helped me see I can still go out, get a job, and go out with people and have a good time.”

–Diane Christiansen, program participant

carf INTERNATIONAL

Bancroft Brain Injury Services is accredited by CARF International (Commission on Accreditation of Rehabilitation Facilities) for the following programs:

- Interdisciplinary Outpatient Medical Rehabilitation Programs:
Brain Injury Program (Adults)
- Residential Rehabilitation Programs:
Brain Injury Programs (Adults)
- Vocational Services: Brain Injury Program (Adults)

Abilities of persons upon admission
